

3411 Advanced Control Unit

Step up your Model 3411 or 3401 Troxler nuclear gauge. The Advanced Control Unit will transform an older model gauge into a more modern gauge, very similar to the current Model 3430. Special functions are available at the press of a button. Offsets are applied with a simple series of keypresses. No more knobs and switches which easily break. Upgrade your Troxler gauge today with this authentic Troxler Advanced Control Unit to be sure to get only the best, most reliable parts, service and support.

- Up-to-date electronics are more reliable and less expensive to repair
- Depth of source rod is programmed with a simple keypress
- Calibration constants can be entered via the keypad
- Special functions available are: Special Calibration, Recall, STAT test, Drift test, Air Voids and Void Ratio calculations
- A 2 line by 16 character display screen to view more measurement information at one time
- A "beep" is heard after each keypress to confirm the action
- Stat and Drift test results automatically analyzed to determine pass/fail
- "Smart charging" eliminates the possibility of over charging the gauge
- Easy installation can be done in the field

To purchase the Advanced Control Unit, please contact a Troxler representative.
